

Fabrice Van Boeckel

Data Scientist — NLP & AI for Legal Technology

BRUSSELS, BELGIUM · +32 479 34 22 90 · FABRICEVB@HOTMAIL.COM · FABRICEVANBOECKEL.COM

Data scientist building NLP and retrieval systems for legal text at production scale — currently the AI/data governance function for the Court of Justice of the EU's case law across 27 legal systems and 24 languages. Five years before that shipping the models and dashboards litigation teams used directly in court. Native to the legal domain your customers work inside, not just to the tooling.

EXPERIENCE

Oct 2024 — Present	Administrator — Data Scientist, Innovation Lab Court of Justice of the European Union · Luxembourg - Built the retrieval pipeline turning the Court's entire case law into a clean, queryable dataset — parsing, semantic chunking, and a RAG architecture giving an LLM precise, sourced access to the jurisprudence. - Shipped NLP features end to end: classification, named entity recognition, summarisation, a research-assistant chat interface — from experiment to production. - Designed the evaluation KPIs and human-in-the-loop protocols that make those systems' outputs defensible, not just accurate. - Daily bridge between legal stakeholders and engineering — translating what a model can be trusted to do into decisions non-technical people make. Tech: Python, LLMs & RAG, NLP, SQL, AWS, Azure
Jan 2019 — Jun 2024	Senior Statistician / Data Scientist CDC Cartel Damage Claims Consulting · Belgium · promoted from Statistician - Built and owned the dashboards and reporting pipelines lawyers and clients used directly in court, across multiple jurisdictions at once. - Ran data collection and analysis at real scale — 1M+ data points, ~250,000 documents, 1,000+ companies — coordinating internal teams and outside experts against fixed legal deadlines. - Advanced econometric modelling for damages quantification; outputs tested directly by opposing experts and courts. Tech: Python, R, SQL, Airflow, Kedro, SAS, Power BI
2023 — Present	Reserve Officer — Advisor in Data Science Belgian Navy, Belgian Defence Data analysis for operational readiness and planning, reporting into a formal command structure.
Sep 2018 — Jun 2019	Research Intern, R&D / Forecasting National Bank of Belgium · Part-time (40%) Economic growth prediction using time-series and survey data; presented to the Bank's Council of Regency.

SELECTED BUILDS

2024 — 2026	Case-law research assistant (RAG) Retrieval-augmented generation over decades of EU case law; chat-based research assistant now used by legal staff across the institution.
2022 — 2024	Cartel damages quantification models Econometric overcharge models for follow-on competition damages, robust to data gaps, reviewed by opposing experts without retraction.

EDUCATION

2020 — 2021	LL.M., Competition Law and Economics Brussels School of Competition, Belgium
2016 — 2019	MSc in Statistics — EMOS (European Master in Official Statistics) KU Leuven, Belgium

SKILLS & LANGUAGES

Data & ML: Python, R, SQL, LLMs/RAG, NLP, Hugging Face, scikit-learn, spaCy

Pipelines & delivery: Airflow, Kedro, dbt, FastAPI, Docker, AWS, Azure

Governance: AI Act, GDPR, model risk, human-in-the-loop design

French — native · English — fluent · Dutch — fluent

GradStat (Royal Statistical Society, UK)

NLP Specialization — DeepLearning.AI
